

How to Use

Carpet & Upholstery Protection

Once a textile surface has been properly cleaned, the job is not complete until that surface is protected. In addition to unsightly appearance, soil is a destructive force promoting fiber abrasion, which can result in permanent appearance reduction. Fiber protectors not only make the professional cleaner's job easier, they also make the routine vacuuming more productive. The more complete the process of routing dry soil removal, the longer the useful life of carpet and upholstery fabrics.

Pre-Cleaning Inspection

Qualification prior to cleaning is the best time to promote carpet and upholstery protectors. This is your opportunity to illustrate where protection is most needed and why. Point out to the customer areas where spots and stains are concentrated as well as the prominent appearance difference in high traffic areas. Use Chemspec's Sales Brochures to inform your customers of your additional services.

Preparation of Carpet and Fabric

During the vacuuming step, the advantages of adequate protection will be most obvious. The use of fabric protectors will allow more complete and efficient dry soil removal, subsequently resulting in more effective cleaning. The actual cleaning and spotting procedures will also be assisted by systematic protection.

Carpet and Fabric Protection Techniques

Apply carpet protectors immediately after cleaning. Stainshield® Concentrate may be applied to either a dry or damp carpet by altering the dilution ratio. The properly diluted product should be applied with a uniform and consistent spray. A pump-up or electric sprayer should be used. Once topically applied, the protector should be groomed into the pile to ensure complete penetration and coverage of the fluorochemical. Be sure to follow proper ventilation and drying techniques.

Introducing the latest innovation from DuPont, the industry leader in soil and stain-resistance technology, Teflon® Advanced carpet protector. A new, improved carpet protector that provides advanced repellency and outstanding soil protection for all types of residential carpet.

All Fabric Stainshield® is a solvent-based protector designed specifically for upholstery, draperies and other fine fabrics. Like carpet, fabrics need to be cleaned and restored for a healthy home interior. As a final step, protection extends the useful life of all these fine textiles. Dry soil, oily spills and stains release quickly when attended to. All safety precautions must be followed as stated on product labels.

Chemspec Support

Our society today spends a great deal of time indoors where we incur greater environmental exposures. When carpets and fabrics are frequently cleaned, air quality is improved and the investment of furnishings are protected.

Chemspec offers continuing education to support your business opportunities as you focus on delivering an improved quality of life to your consumer. Give us a call on the "solution Line" for up-to-the-minute information and resources for your cleaning needs.
